# **Allgemeine Technische Angaben**

#### Netzteil

Energieversorgung: 1) 3 x 1,5 V Mignonzellen 2) 5 V durch Ext. Netzteil

Geringste zulässige Batteriespannung: 3,2 V

Max Stromaufnahme: 130 mA (DC)

30 mA (230V, AC)

#### Tuner

Wellenbereiche:

UKW 87,5...108 MHz MW 522...1710 kHz LW 153...513 kHz 1715...29995 kHz KW

#### Abstimmschritte:

Wellenbereiche	Elektronisch und Handabstimmung
UKW MW	50 kHz 9 kHz
LW	9 kHz
KW	5 kHz

#### Empfindlichkeit:

UKW (S/R = 30 db)  $\leq$  15,9  $\mu$ V (EMK) MW  $(S/R = 20 \text{ db}) \le 2 \text{ mV/m}$  $(S/R = 20 \text{ db}) \le 5,01 \text{ mV/m}$ KW  $(S/R = 20 \text{ db}) \le 25,1 \,\mu\text{V} (EMK)$ 

#### Stop-Pegel:

UKW 15,9 μV (EMK) MW 1,26 mV/m LW 3,16 mV/m KW 20 μV (EMK)

### Zwischenfrequenzen:

FM 10,7 MHz MW/LW 450 kHz

KW 55.845 MHz und

450 kHz

#### Signal/Rauschabstand:

ÜKW > 44 dbMW > 30 dbKW (1nV) > 36 db

Min. Ausgangspg. (NF):

FM 3 mV

#### Verstärker:

NF-Ausgangsleistung (K<sub>ges</sub> = 10%) ≥ 160 mW

### Anschlüsse

711301110330			
Buchse	Eingang/ Ausgang/ Typ	Impedanz	Pegel
Ext. Ant. AM Kopfhörer Netz	E/3,5 A/3,5 E	(RZ600G6) 32 Ω	5 V

## **General Technical Data**

#### Power supply unit

Power supply:

1) 3 x 1.5 V cells IEC R6/AA 2) 5 V via AC/DC adapter

Lowest battery voltage: 3.2 V

Current consumption: 130 mA (DC)

30 mA (230V, AC)

#### Tuner

Range:

87.5...108 MHz FΜ 522...1710 kHz MW LW 153...513 kHz 1715...29995 kHz KW

#### Tuning steps:

Range	Automatical and electronic alignment
FM MW LW	50 kHz 9 kHz 9 kHz
SW	5 kHz

#### Sensitivity:

FM  $(S/N = 30 \text{ db}) \le 15.9 \,\mu\text{V} \text{ (enf)}$ MW  $(S/N = 20 \text{ db}) \le 2 \text{ mV/m}$ LW  $(S/N = 20 \text{ db}) \le 5.01 \text{ mV/m}$ SW  $(S/N = 20 \text{ db}) \le 25.1 \,\mu\text{V} \text{ (enf)}$ 

#### Stop-level:

FM 15.9 μV (emf) MW 1.26 mV/m LW 3.16 mV/m SW 20 µV (emf)

#### Intermediate frequencies:

FΜ 10.7 MHz MW/LW 450 kHz SW

55.845 MHz and

450 kHz

#### Signal-to-noise ratio:

> 44 dbFΜ > 30 dbMW SW (1nV) > 36 db

Min. output (AF):

FM 3 mV

#### **Amplifier**

Power output (T.H.D = 10%) ≥ 160 mW

## Connection

Socket	Input/ Output/ Type	Impedance	Level
Ext. Ant. AM Phones Power	1/3.5 0/3.5 1	(RZ600G6) 32 Ω	5 V

# Einbau - Ausbau/Assembly - Disassembly

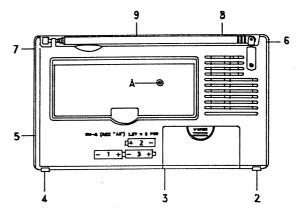

# Gehäusefront u. Rückwand

#### Frontpanel a. back lid

Die Schraube bei A berücksichtigen. Have regart to screw on position A

Die Gehäuseschalen sind durch die Haken, Position 2...9 miteinander verbunden.

Frontpanel and backlid hold together with hooks position 2...9.

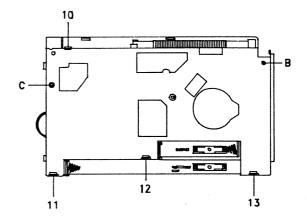

# Tuner-Verstärkerplatine/

#### Tuner-Amplifier p.c.b.

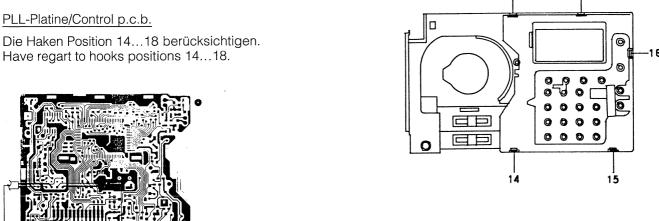

Die Schrauben bei B und C berücksichtigen. Have regart to screws on positions B and C.

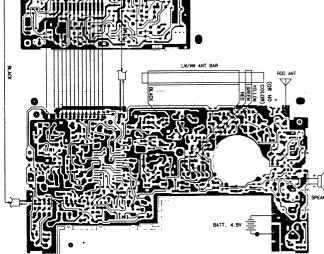

Die Haken Position 10...13 berücksichtigen. Have regart to hooks, position 10...13.

### PLL-Platine/Control p.c.b.

Have regart to hooks positions 14...18.

Verdrahtungsplan Wiring diagram

# Abgleich

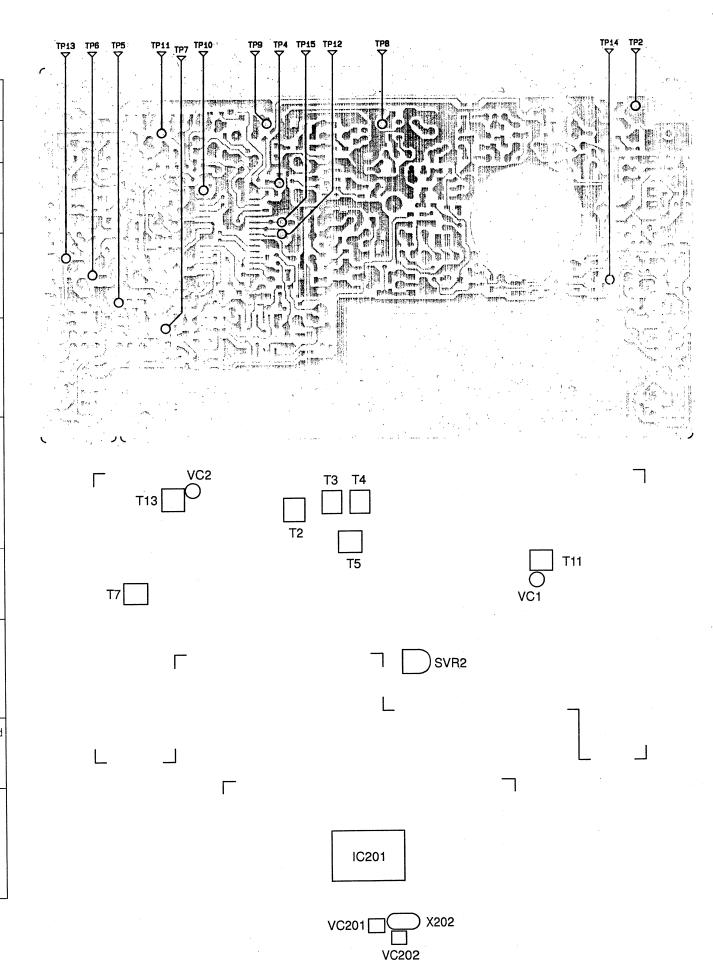

Schritt	Funktion	Vorbereitung	Signaleingang	Einstell- Element	Meßwert
1	Uhrentakt	Gerät verriegeln über "Lock".	-	VC201	32,768 kHz
2	PLL-Referenz frequenz	Das Radio einschalten. Das Gerätedisplay auf 108 MHz stellen Einen Frequenzzähler am TP7 und Masse anschließen.	_	VC202	118,69975 + 0,0005 MHz
3	2. AM Oszillator	Das Radio einschalten. KW-Bereich einstellen. AM-Frequenz so einstellen, daß keine Station vorhanden ist. Frequenzzähler an TP8 und Masse anschließen.		T4	55,39485 + 0,0003 MHz
4	2. AM-ZF	Das Radio einschalten. Den Wobbelgeneratoreingang in Serie mit 10 µF-Kondensator an TP5 und Masse anschließen. Den Wobbel- generatorausgang in Serie mit 0,1 µF-Kondensator an TP8 und Masse anschließen.	Um 450 kHz wobbeln	T5	Maximum
5	AM-Empfind- lichkeit. Abgleich mehrmals wiederholen	Das Radio einschalten. Den "AM-Sens-Schalter" auf DX stellen Das RK759-Display auf 15,100 MHz stellen. Abgleichsender an TP2 und Masse anschließen. Voltmeter (10M) an TP14 und Masse anschließen.	15,100 MHz (1kHz) 30%	T2/T3	Max 1 kHz-Pegel
		Frequenzzähler am TP4 und Masse anschließen	_	T4	450 kHz ± 0,15 kHz
6	FM-Eckfrequenz	Das Radio einschalten. Das RK759-Display auf 108 MHz stellen. Voltmeter an TP9 und Masse anschließen.	_	T10	10,5 ± 0,5 V
7	FM-Empfind- lichkeit. Abgleich mehrmals wiederholen	Das Radio einschalten. Voltmeter am TP14 (Lautspr.) und Masse an- schließen. Abgleichsender an TP2 (Ant) und Masse anschließen. RK759-Display auf 90 MHz stellen. RK759-Display auf 106 MHz stellen.	90 MHz/40kHz/1kHz 106 MHz/40kHz/1kHz	T11/T13 VC1/VC2	Max. 1 kHz-Pegel Max. 1 kHz-Pegel
8	FM-Feldstärker	Das Radio einschalten. Abgleich- sender am TP2 (Ant) und Masse anschließen. RK759- Display auf 98 MHz stellen.	1 mV 97,975 oder 98,025 MHz	SVR2	Die "Tuning" Diode soll zu leuchten beginnen.
9	AM-ZF-Falle	Das Radio einschalten. Den "AM-Sens-Schalter" auf DX stellen. RK759-Display auf 450 kHz stellen. Abgleichsender an die Ferritantenne ankoppeln. Voltmeter an TP14 und Masse anschließen.	450 kHz/30%/1kHz	Т7	Min. 1kHz-Pegel

# Alignment

Function	Preparation	Signal input	Adjusting element	Indicated value
Clocktime accuracy	Set to lock on position.	-	VC201	32.768 kHz
PLLfrequency	Set power switch to on. Set RK759-display to 108 MHz. Connect frequency counter to TP7 and greound.	_	VC202	118.69975 + 0,0005 MHz
2nd AM oszillator	Set power switch to on. Push to SW-buttom. Set RK759-display far away from any station to avoid interference. Connect frequency counter to TP8 and ground.	_	T4	55.39485 + 0.0003 MHz
2nd AM-IF	Set power switch to on. Connect sweep generator input in series with 10 µF-capacitor to TP5 and ground. Connect sweep generator output in series with 0.1 µF-capacitor to TP8 and ground.	Wobble at 450 kHz	T5	Maximum
AM-Sensitivity. Repeat adjustment several times	Set the power switch to on. Set AM-Sens-Switch to DX position. Set RK759-display to 15.100 MHz. Connect RF-generator to TP2 and ground. Connect voltmeter (10 M) to TP14 and ground	15.100 MHz (1kHz) 30%	Т2/Т3	Max 1 kHz-level
	Connect frequency counter to TP4 and ground		T4	450 kHz ± 0.15 Hz
FM-Corner- frequency	Set the power switch to on. Set RK759-display to 108 MHz. Connect voltmeter to TP9 and ground.	_	T10	10.5 ± 0.5 V
FM-Sensitivity. Repeat adjustment several times	Set the power switch to on. Connect voltmeter to TP14 (Speaker) and ground. Connect RF-generator to TP2 (ant) and ground. Set RK759-display to 90 MHz. Set RK759-display to 106 MHz.	90 MHz/40kHz/1kHz 106 MHz/40kHz/1kHz	T11/T13 VC1/VC2	Max 1 kHz-level Max 1 kHz-level
FM-signal strength	Set the power switch to on. Connect RF-generator to TP2 (ant) and ground. Set RK759-display to 98MHz.	1 mV 97.975 or 98.025 MHz	SVR2	Tuning-LED should start to light.
AM-IF-trap	Set the power switch to on. Set AM-sens-switch to DX position. Set RK759-display to 450 kHz. Couple RF-generator to bar antenna (20t). Connect voltmeter to TP14 and ground.	450 kHz/30%/1kHz	Т7	Min. 1kHz-level
	Clocktime accuracy  PLLfrequency  2nd AM oszillator  2nd AM-IF  AM-Sensitivity. Repeat adjustment several times  FM-Corner-frequency  FM-Sensitivity. Repeat adjustment several times  FM-Sensitivity. Repeat adjustment several times	Clocktime accuracy  PLLfrequency  Set power switch to on. Set RK759-display to 108 MHz. Connect frequency counter to TP7 and greound.  2nd AM oszillator  Set power switch to on. Push to SW-buttom. Set RK759-display far away from any station to avoid interference. Connect frequency counter to TP8 and ground.  2nd AM-IF  Set power switch to on. Connect sweep generator input in series with 10 μF-capacitor to TP5 and ground. Connect sweep generator output in series with 0.1 μF-capacitor to TP8 and ground.  AM-Sensitivity. Repeat adjustment several times  Set the power switch to on. Set AK759-display to 15.100 MHz. Connect RF-generator to TP2 and ground. Connect voltmeter (10 M) to TP14 and ground  FM-Corner-frequency  FM-Corner-frequency  FM-Sensitivity. Repeat adjustment several times  Set the power switch to on. Set RK759-display to 108 MHz. Connect voltmeter to TP9 and ground.  FM-Sensitivity. Set the power switch to on. Connect voltmeter to TP9 and ground.  FM-Sensitivity. Set the power switch to on. Connect voltmeter to TP14 (Speaker) and ground. Connect RF-generator to TP2 (ant) and ground. Set RK759-display to 90 MHz. Set RK759-display to 106 MHz.  FM-signal strength  Set the power switch to on. Connect RF-generator to TP2 (ant) and ground. Set RK759-display to 98MHz.  AM-IF-trap  Set the power switch to on Set AM-sens-switch to DX position. Set RK759-display to 450 kHz. Couple RF-generator to bar antenna (20t). Connect voltmeter to TP14	Clocktime accuracy  Set to lock on position.  PLLfrequency  Set power switch to on. Set RK759-display to 108 MHz. Connect frequency counter to TP7 and greound.  2nd AM oszillator  Set power switch to on. Push to SW-buttom. Set RK759-display far away from any station to avoid interference. Connect frequency counter to TP8 and ground.  2nd AM-IF  Set power switch to on. Connect sweep generator input in series with 10 µF-capacitor to TP5 and ground. Connect sweep generator output in series with 0.1 µF-capacitor to TP8 and ground.  AM-Sensitivity. Repeat adjustment several times  Set the power switch to on. Set AM-Sens-Switch to DX position. Set RK759-display to 15.100 MHz. Connect RF-generator to TP2 and ground. Connect voltmeter (10 M) to TP14 and ground  Connect frequency counter to TP4 and ground.  FM-Corner-frequency  Set the power switch to on. Set RK759-display to 108 MHz. Connect voltmeter to TP9 and ground. Set RK759-display to 106 MHz.  Set RK759-display to 106 MHz. Set RK759-display to 90 MHz. Set RK759-di	Clocktime accuracy  Set to lock on position.  Clocktime accuracy  Set power switch to on. Set RX759-display to 108 MHz. Connect frequency counter to TP7 and greound.  2nd AM oszillator  Set power switch to on. Push to SW-buttom. Set RX759-display far away from any station to avoid interference. Connect frequency counter to TP8 and ground.  2nd AM-IF  Set power switch to on. Connect sweep generator input in series with 10 µF-capacitor to TP5 and ground. Connect sweep generator output in series with 0.1 µF-capacitor to TP5 and ground.  AM-Sensitivity. Repeat adjustment Several times  Set the power switch to on. Set RX759-display to 15.100 MHz. Connect RF-generator to TP2 and ground.  Connect frequency counter to TP4 and ground  Connect frequency counter for TP4 and ground  FM-Corner frequency counter for TP4 and ground.  FM-Sensitivity. Set the power switch to on. Set RX759-display to 108 MHz. Connect voltmeter to TP9 and ground.  FM-Sensitivity. Set the power switch to on. Connect voltmeter to TP9 and ground.  FM-Sensitivity. Set the power switch to on. Connect voltmeter to TP14 (Speaker) and ground. Set RX759-display to 106 MHz. Set RX759-display to 90 MHz. Set RX759-display to 90 MHz. Set RX759-display to 106 MHz. Set RX759-display to 108 MHz. Set RX759-display to 450 KHz. C

# Testbedingungen für IC- und Transistorspannungen:

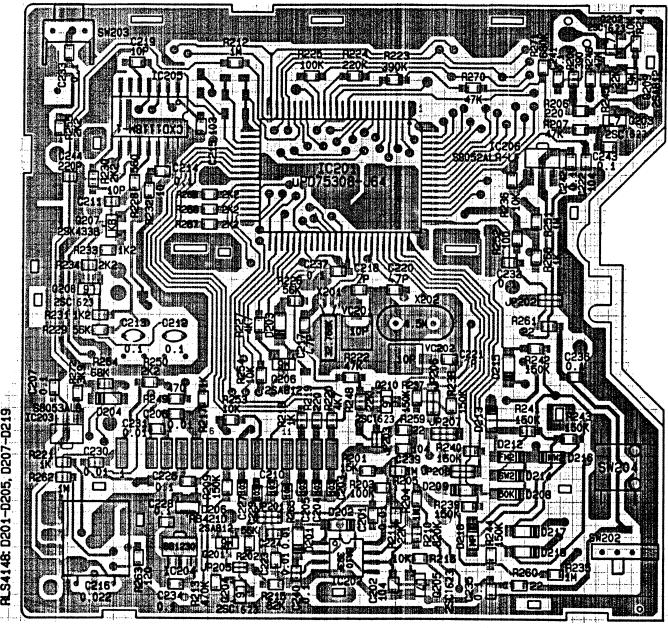

- 1. Signallos und Lautstärke auf Minimum.
- 2. Lautsprecherbetrieb.
- 3. Es ist keine externe Antenne eingesteckt.
- 4. AM wurde auf 1710 kHz eingestellt.
- 5. FM wurde auf 98 MHz eingestellt und Mono/Stereo-Schalter stand auf Stereo.
- 6. Es wurden frische Batterien im Gerät verwendet.
- 7. Die Spannungen in den Tabellen sind in Volt angegeben.

# **Testing Condition:**

- No INP Signal and volume is nin.
   Speaker is useing.
- 3. Extension ant. is not useing.
- 4. AM is received by 1710 kHz.5. FM is received by 98 MHz and put on the stereo.
- 6. Load in main battery 4.5 V DC.
- 7. Unit of voltage: V DC

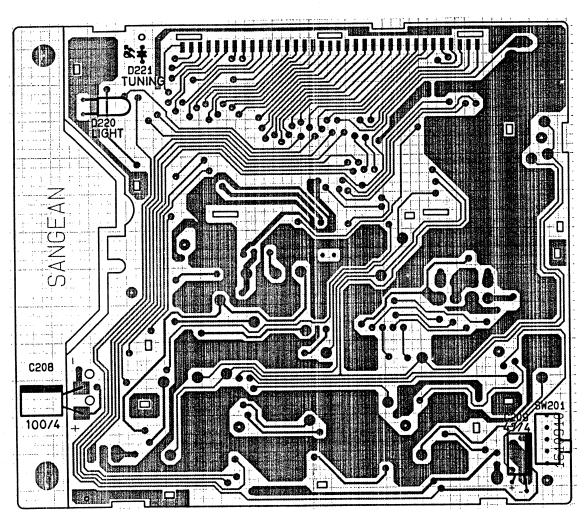

Hinweis:

Die folgenden Dioden sind im Gerät nicht vorhanden: D208, D212, D214, D216

Hint:

Following diodes are deleted on p.c.b.: D208, D212, D214, D216

Abstimmschrittänderung, Hinweis Weltempfänger RK759G6 / RK659G6

#### Hinweis:

Es werden nur Geräte mit 100 kHz UKW-Abstimmschritten gebaut. Andersartige Angaben in der Kundendienstschrift und der Bedienungsanleitung sind falsch.

Es ist möglich auf 50 kHz UKW-Abstimmschritte umzurüsten, dabei verlangsamt sich die ATS-Funktion

#### Umbau:

- 1. Sicherstellen, daß kein Steckernetzteil an der externen Gleichspannungsbuchse angeschlossen ist.
- 2. Eine Diode RLS4148, Mat-Nr. 79 1159 bei Pos. D208 nachrüsten.
- 3. Reset-Knopf im Batteriefach drücken.

#### Lagerhaltung:

Diode RLS4148, Mat-Nr. 79 1159

LW/MW-Empfang mit externer KW-Antenne Weltempfänger RK759G6/RK659G6

#### Beanstandung:

Der LW/MW-Empfang verschlechtert sich erheblich mit dem Anschluß der KW-Antenne RZ600G6 an die externe Antennenbuchse.

#### Ursache:

Fehlangabe in der Bedienungsanleitung. Die Antenne RZ600G6 führt nur zur Verbesserung im KW-Bereich. Bei LW- und MW-Betrieb erfolgt die Umschaltung auf LW- bzw. MW-Betrieb im Antennenkreis; die RZ600G6 ist aber hinsichtlich Pegel und Impendanz völlig unangepaßt.

#### Abhilfe:

Verbesserungen lassen sich für LW- und MW durch Anschluß einer 50 Ohm Aktivantenne mit entsprechender LW/MW-Kanalvertärkern erzielen.

Tastenfeldblockade durch Reset, Hinweis Weltempfänger RK759G6 (RK659G6)

#### Hinweis:

Die Reset-Funktion nur mit eingestecktem Steckernetzteil verwenden. Reset-Taste für mehr als 1 Sekunde drücken.

Bei Tastendruck auf Reset ohne Steckernetzteil werden alle Bedienfunktionen blockiert und es erscheint die Uhrenanzeige auf dem Display.

Weckzeiteinstellung in der 2. Zeitzone Weltempfänger RK759G6 (RK659G6)

#### Beanstandung:

Es läßt sich keine 2. Weckzeit, wie in der Bedienungsanleitung S17 (Mat-Nr. 53 0912) beschrieben, in die 2. Zeitzone einprogrammieren.

#### **Ursache:**

Die Angabe in der Bedienungsanleitung ist nur bedingt richtig. Mit Eingabe einer 2. Weckzeit in die 2. Zeitzone ("Dual time") wird die 1. Weckzeit überschrieben.

#### Abhilfe:

Eine 2. Weckzeit läßt sich nur erzielen, wenn auf die andere Weckart, HWS oder Radio, gegenüber der 1. Weckzeit umgestellt wird.
